

## 2030 Vision

A six pixel by six pixel grid  
changing one pixel  
seventy-two times a second  
would take just over thirty  
years to display every  
possible image. (Each pixel  
would only have the option  
of being either black or  
white.) If the display of all  
possible images began at  
midnight on 1 January 2000  
all possibilities would be  
exhausted at 17:26:17  
on 30 March 2030.
